Cal EOC Incident – 2014 Drought

- SOC / Inland REOC remains activated in support of 2014 Drought
- DTF Drought Update 07/28/15 is attached

SITUATION SUMMARY

Weather of Concern

- Fire weather is a concern for portions of far northern California through Wednesday 07/29/15.

Northern California & Central Coast

- A combination of high pressure and off shore winds will aid in bringing temperatures near record levels on Thursday. In addition, look for temperatures to stay above the century mark for the Rogue valley through Friday. Although the temperatures are above average, late July is statistically the warmest period of the year for Medford along with many locations across the US.

Central California AND Southern San Joaquin Valley:

- Expect showers and thunderstorms to develop during the afternoon and evening hours beginning Thursday through the end of the weekend. Development is expected mainly over the crest of the Sierra Nevada as well as the desert and mountains of Kern county. Hikers and other outdoor enthusiasts should keep a watchful eye on the sky and be prepared to take shelter if and when the weather turns threatening. In addition to dangerous lightning, thunderstorms can bring gusty winds, heavy rain and small hail.

Southern California:

- A prolonged period of monsoon moisture will bring the potential for showers and thunderstorms to Southern California through this weekend. The most active conditions will be found over the mountains and deserts in the afternoons and evenings, possibly drifting into the valleys at times. And isolated, mainly nocturnal and early morning showers and thunderstorms cannot be ruled out along the coast and over the coastal waters.

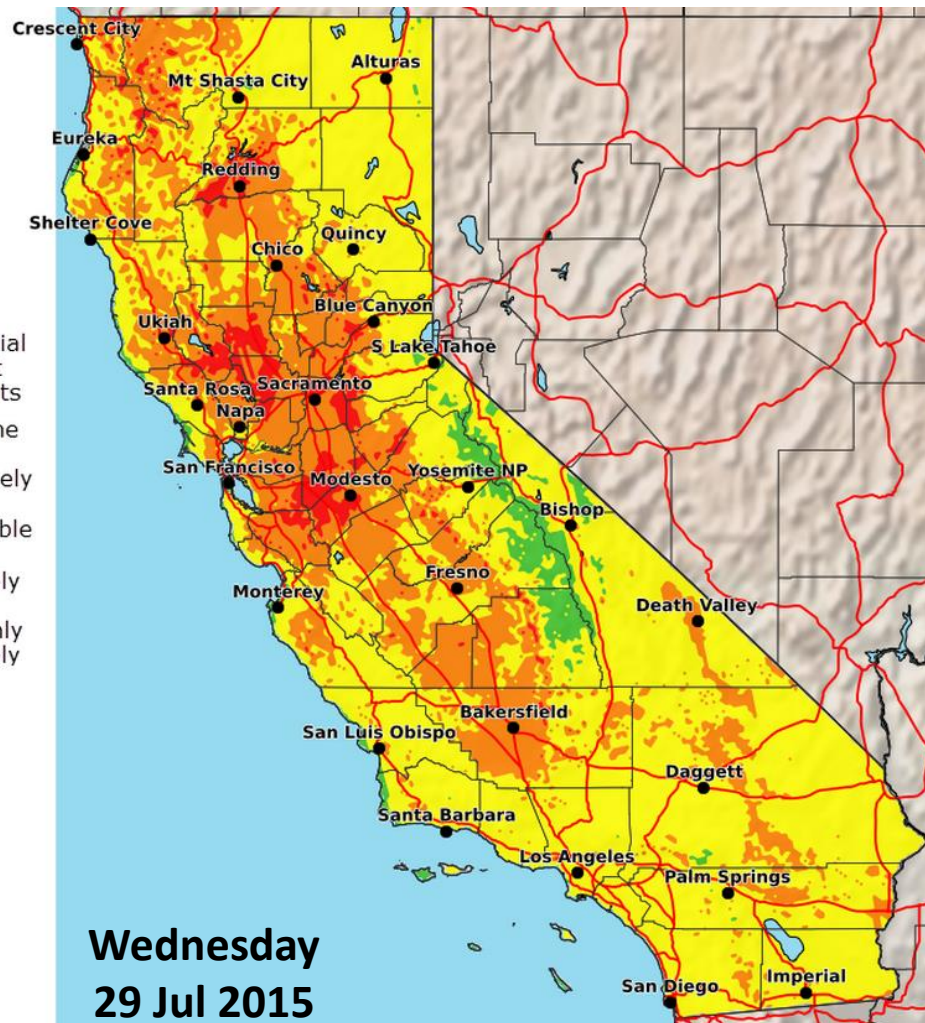

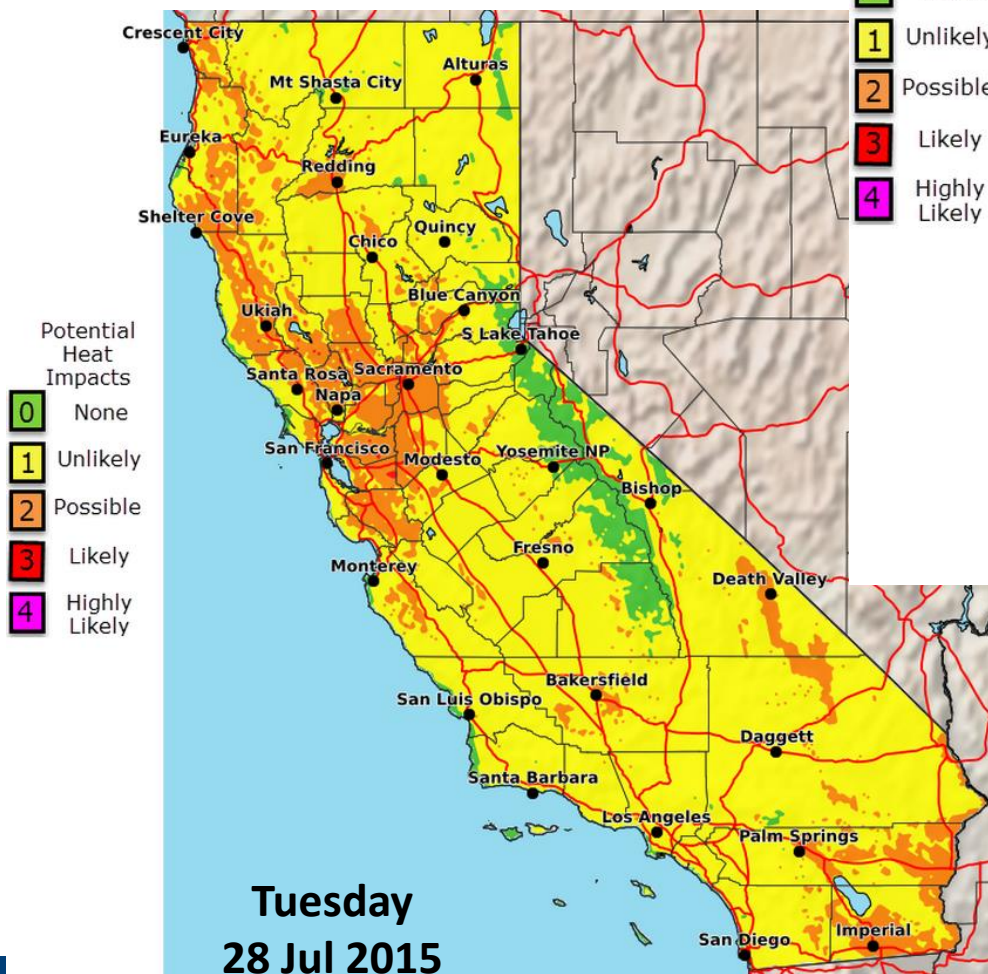

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

Executive Overview

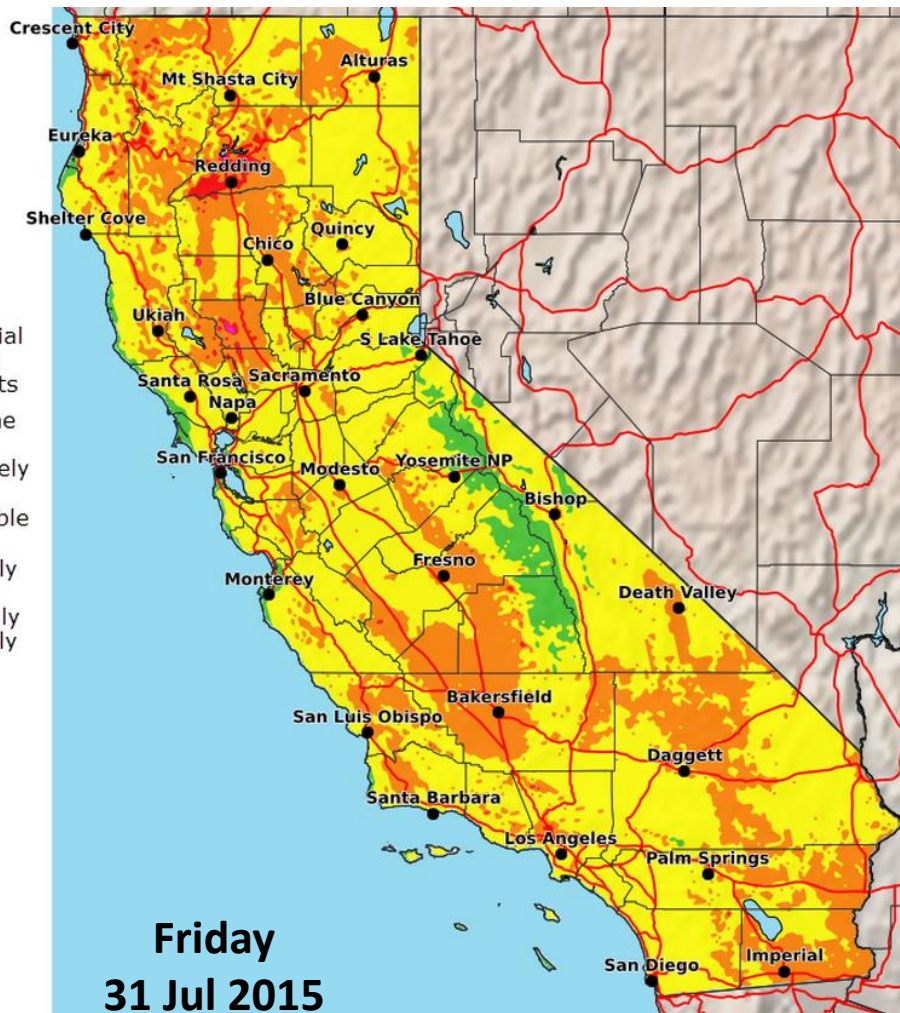

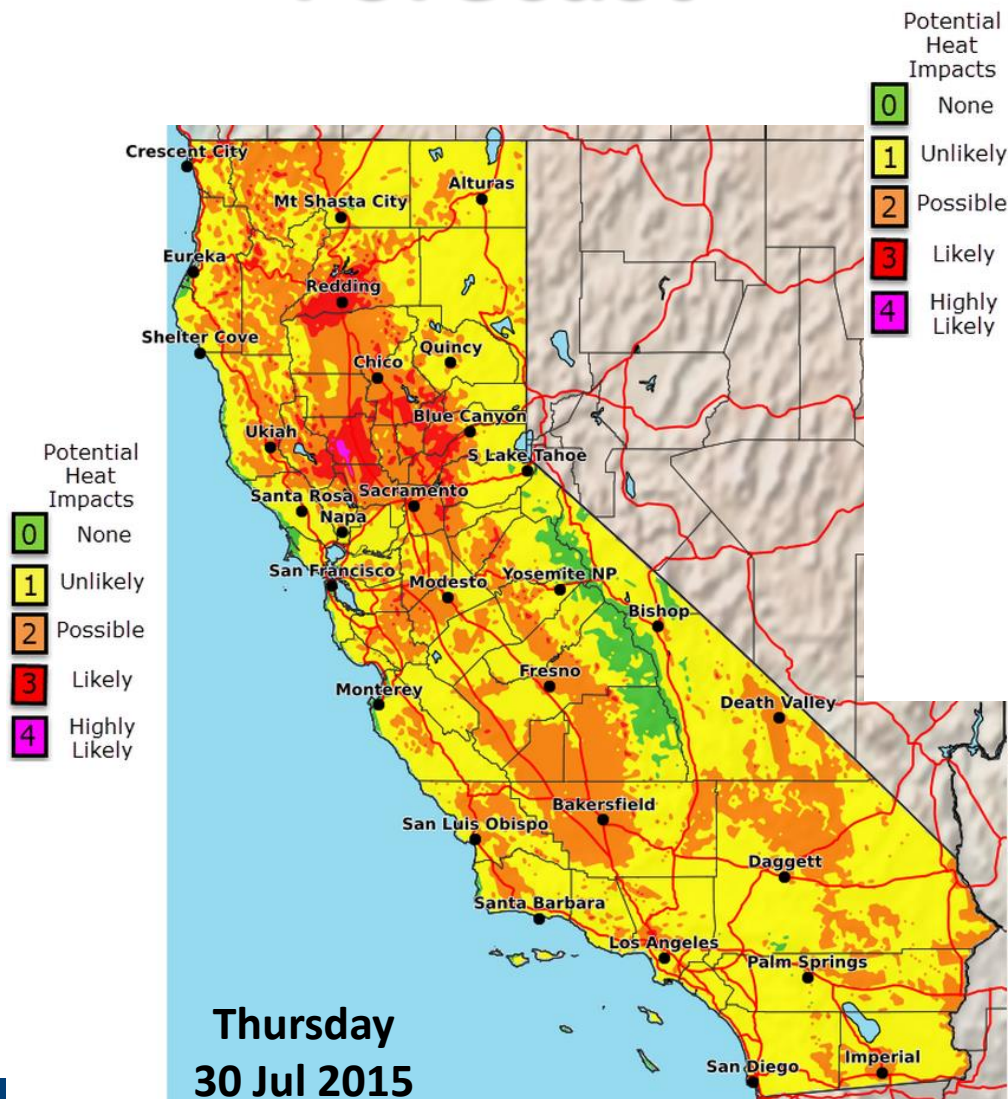

- Hot temperatures across the state starting Tuesday and continuing through Thursday. Warmest days will be Wednesday and Thursday.
- Slightly cooler temperatures Friday and through the weekend
- Greatest heat impacts over the Sacramento River Valley Wednesday and Thursday
- Increasing threat of thunderstorms and localized heavy rain and flash flooding starting Wednesday over far southern part of state shifting north Thursday and through the weekend, mainly over the Sierra.
- Elevated fire weather threat due to increased thunderstorm activity

WEATHER

WEATHER SYNOPSIS BY REGION:

Northern Region

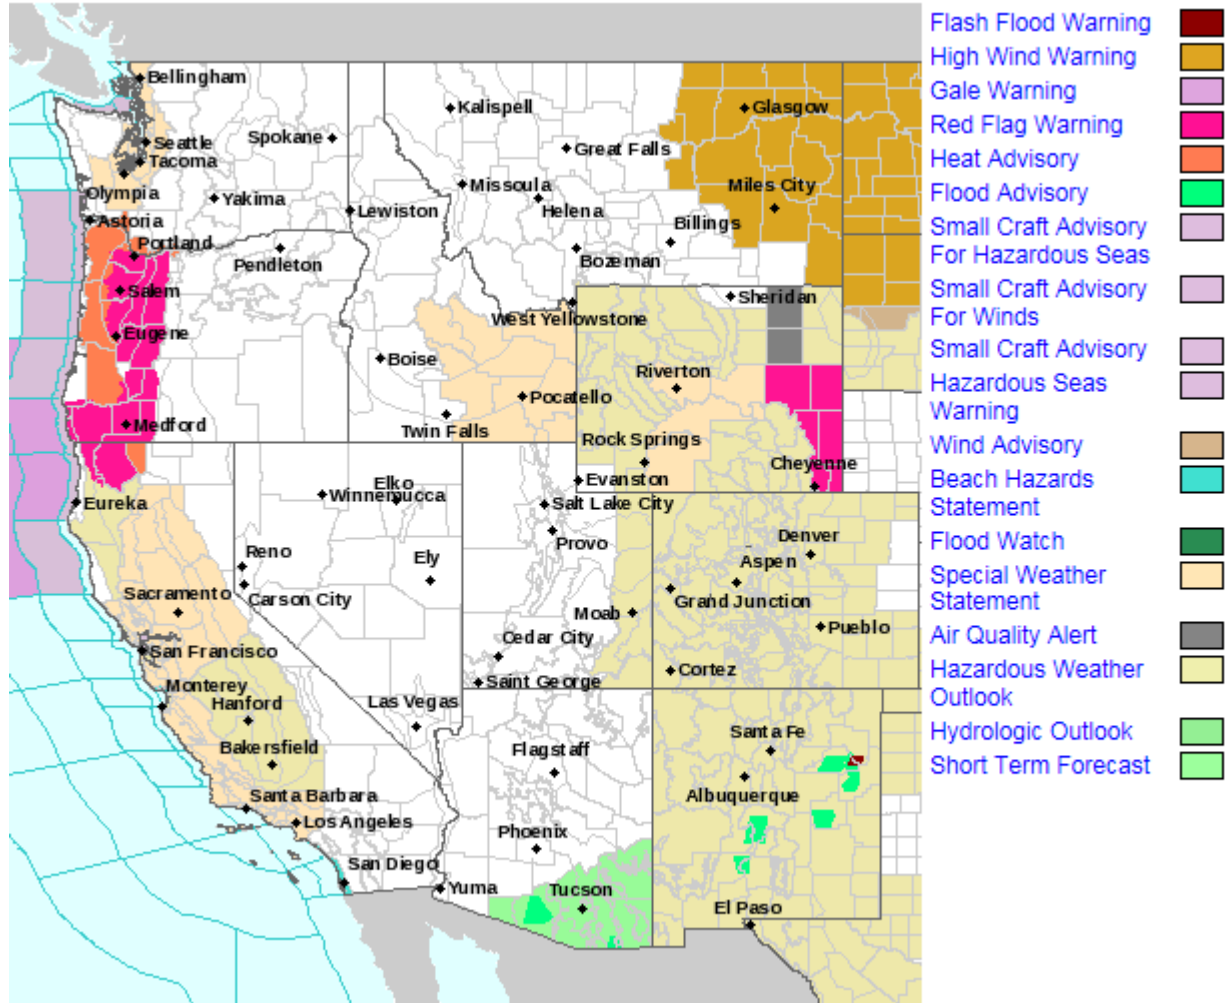

High pressure has arrived over the region and will become very strong over the next few days. Temperatures will show a marked increase today over yesterday and this will happen again Wednesday. The warmest inland valley areas will be on the order of 105-112 through Friday. Afternoon relative humidity will be very low and overnight recoveries will be poor to low-end moderate. Today into Wednesday morning, the north to east offshore winds will continue and be moderate in the areas favored by those directions. Another night of low relative humidity in the windy areas will be in place. Those winds will subside considerably during the day Wednesday then become mostly southerly to westerly and seasonably light Thursday onward. Late Thursday some monsoonal moisture is expected to have worked its way into the Northern Operational area from the south. The details of how this moisture will affect the Northern Operational area remains very uncertain. For now, however, it appears our western locations may be affected first, especially the Bay Area where some evening or overnight thunderstorms may become possible Thursday. Either way, the moisture is expected to have spread across the Northern Operational area Friday, and isolated afternoon and evening mountain thunderstorms are expected to develop. Saturday through next Monday are also expected to have daily isolated afternoon and evening mountain thunderstorms. Friday's storms may be more dry than wet, while those over the weekend into early next week are expected to be more of a mix of mostly wetter and some relatively dry storms. The high will weaken somewhat over the weekend with temperatures cooling about 5-8 degrees from the peak heat this week but will remain noticeable above normal into early next week.

Southern Region

High pressure is expected to shift from Northern California into the Four Corners region during the next few days. This will result in well-above normal temperatures and favorable southeasterly flow for the import of monsoonal moisture. Today will be significantly warmer than the past few days and inland areas may see temperatures leap 8-10 degrees over yesterday's readings. Overall, highs today will be in the lower-80s at the coast, upper-90s to near 100 in the valleys, and up to 110 in the deserts. Expect similar high temperature readings each day through the end of the week. Minimum relative humidity may drop into the 10-15% range, but higher afternoon relative humidity is anticipated once the monsoonal moisture arrives. Isolated thunderstorms will be possible across the north and east sides of the Angeles, San Bernardino and Cleveland National Forests into the deserts as the first surge of moisture arrives Wednesday. By Thursday and Friday, much of the higher terrain of Central California may see the threat of afternoon convection. The flow aloft may turn a bit more southerly by Sunday which may lead to fewer thunderstorms. Most storms will produce some rainfall, but a few dry strikes may be possible as depth of atmospheric moisture will not be nearly as great as during the past rainfall event. Above normal temperatures with a low level of afternoon and evening thunderstorms is expected to continue well into next week.
